**STUDY OF THE INFLUENCE OF THE CORONA CRISIS  
ON THE CONDITION OF THE TRANSPORT SECTOR OF UKRAINE**

The impact of the Corona Crisis had a negative impact on the activities of many sectors of the domestic economy, including transport. The purpose of the article is to study the impact of the Corona Crisis on the state of the transport sector of Ukraine and justify the measures aimed at restoring its stable functioning and the fastest achievement of pre-crisis indicators.

To achieve this purpose, the article examines the forecasts of international transport organizations regarding the prospects for the development of world transport in the conditions of the pandemic. The analysis of volumes of freight and passenger carriage by the different types of transport of Ukraine has been carried out. It has been determined that in the conditions of the pandemic, in the field of freight carriage, a significant decrease in volumes of freight carriage is observed on automobile, river, sea, pipeline, and air transport. The most significant impact of the Corona Crisis is observed on all types of passenger transport, especially air. Such a situation is explained by the fact that the introduced international restrictions are more related to the carriage of passengers. The decrease in the volume of carriage of freight and, especially, passengers by all types of transport has led to the emergence of new and exacerbation of old problems. Systemic problems include a significant degree of depreciation of fixed assets and insufficient development of transport infrastructure.

It has been revealed and substantiated the problems of functioning of the transport sector in the conditions of the Corona Crisis, which are divided into problems of macro- and micro-level. It has been noted that overcoming the negative impact of the Corona Crisis on the state of the transport sector of Ukraine requires significant support from public authorities and local governments.

The main measures aimed at restoring the effective functioning of the transport sector include the development of piggyback transport technologies, the introduction of network approaches to the interaction of different types of transport, the development of information and communication, and digital technologies.

**Keywords:** transport sector, financing, state support, Corona Crisis, problems, volume of carriage, incomes, development.
